

TRAINING TANK CAR

Tank wagons are used to transport various dangerous goods by railway. The personnel entrusted with this must be familiar with the required regulations. In order to be able to make the right decisions and thus to avoid damage, it is all the more important to build up and continuously maintain competence. For this reason, there are legal regulations that require this competence.

Before each activity related to the transport of dangerous goods, instruction is required pursuant to Section 1.3 of the International Carriage of Dangerous Goods by Rail (RID). This instruction should be repeated at regular intervals. This has to do with knowledge of how to apply legal requirements (RID/ Ordinance on the Transport of Dangerous Goods by Road, Rail and Inland Waterways (GGVSEB)), as well as the correct use, marking and maintenance of tank wagons.

Our training courses are intended for owners and Entities in Charge of Maintenance (ECM) of tank wagons, logisticians, loading and operating staff, safety advisors and maintenance technicians dealing with tank wagons transporting dangerous goods. Our competent trainers will provide you with the knowledge you need to carry out your tasks in connection with the carriage of dangerous goods by rail in accordance with the regulations.

Our modern training space in Brandenburg, Hamelin or Hanover are at your disposal as is our training tank car containing common fitting and other equipment. For example, construction and function are explained in a practical manner using sectional or functional models to explain safe handling.

The training tank car is available at RailTraining training locations or at your location, provided that a suitable siding and premises are available. This means that we can also carry out the training courses anywhere in Germany.

Let us create an individual offer for you.

TRAINING

Basic seminar on tank wagons for dangerous goods

Basic knowledge about vehicle technology on freight wagons is explained taking into account the regulations. Tank wagons are a special type of freight wagon used to transport liquid, gaseous, or dusty dangerous goods. In addition to the legal transport regulations, the high technical requirement profile of the wagons is particularly important, which is what is presented in this seminar.

Target group:

Beginners, authorised persons, maintenance workshops and other interested participants

Tank wagon technology seminar I

Various functional descriptions will be explained using valve models. The goal is to achieve an elementary basic understanding of the structure and use of tank wagons. Tank technology, fittings and equipment parts.

Target group:

Technical and operational company divisions, owners and Entities in Charge of Maintenance (ECM), logisticians, shippers, repair shops and other interested participants

Tank wagon technology seminar II

Here further special knowledge about fittings, seals, material properties, and other tank-specific questions are explained. Tank technology, fittings, equipment parts, safety-relevant components such as protection against overriding buffers, crash buffers, derailment detectors.

Target group:

Technical and operational company divisions, owners and Entities in Charge of Maintenance (ECM), logisticians, shippers, repair shops and other interested participants
